

READY, SET ON AND TEST

These systems, equipped with Holland's Argus® Track Measurement Technology, are usable under any conventional hi-rail vehicle with any standard hitch receiver. Our suite of portable inspection systems is designed to be installed on any hi-rail vehicle via a wireless connection between the Argus® system and an onboard tablet. Our units are powered through any 12-volt trailer plug using your vehicle as the power source. These units feature a lightweight and foldable mounting design which comes with a convenient travel and storage case.

TRACK INSPECTOR FEATURES

- Full **geometry system and half rail profile**
- Single system unit with **two individual rail sensors** depending on configuration and use
- Able to be mounted, configured, and calibrated by **one person in less than 30 minutes**
